

ORACLE

Develop Web Services and Microservices with Java

Titulo: Develop Web Services and Microservices with Java

Clave ST09813GC10

Duración 05 días

Temario

1 **Develop Web Services and Microservice Applications with Java**

Course Goals 1-2

Audience 1-3 Course

Practices 1-4

2 **Introduction to Web**

Services Objectives 2-2

What is a Service? 2-3

Web Services Types 2-4

Business and System Integration

Challenges 2-5

Building a Portfolio of
Services 2-6

Point-to-Point Service
Interactions 2-7

Service Oriented Architecture 2-8

SOAP WebServices 2-10

SOAP Message 2-11

Web Service Interaction Patterns 2-12

REST Service Conventions and Resources 2-14

REST Communication Model 2-15

Designing Services 2-16

Java Service Implementation
Options 2-17

Java Service Deployment Platforms 2-18

Microservices 2-21

Microservices in Context 2-22

Virtualization and Deployment Containers 2-23

Service Versioning 2-24

Summary 2-25

Practices 2-26

3 Handle XML Using JAXB API

Objectives 3-3

Agenda 3-4

eXtensible Markup Language 3-5

Document Object Model (DOM) 3-6

What is a Well-formed XML Document? 3-7

XML Namespaces 3-8

Agenda 3-10

Parsing and Validating XML Documents 3-11

Use JAXP API to Parse XML Documents 3-12

Agenda 3-15

Accessing XML Document Content Using XPath Expressions 3-16

Transform XML Data 3-19

XSL Transformation 3-22

XQuery Processing 3-23

Agenda 3-24

DTD Validation 3-25

Create and Reference XML Schemas 3-27

Components of an XML Schema 3-29

Built-in XML Schema Data Types 3-30

Describe a Simple Element 3-33

Describe a Complex Element 3-35

Describe Attributes and Attribute Groups 3-39

Agenda 3-41

JAXB API 3-42

JAXB Automation 3-43

JAXB Annotations: Mapping Elements and Attributes 3-45

JAXB Annotations: Mapping Values and Restrictions 3-48

Converting Values with XMLAdapter 3-49

Marshal and Unmarshal XML with JAXB 3-50

Summary

3-52

Practices 3-53

4 Create SOAP Services Using JAX-WS API

Objectives 4-2

Agenda 4-3

JAX-WS Implementation Options 4-4

Automating JAX-WS Development 4-5

Agenda 4-6

WSDL Structure 4-7
WSDLs, Schemas and XML Namespaces 4-8
WSDL Messages, PortTypes, and Operations 4-9
WSDL Bindings and Services 4-10
SOAP Message Format Style and Use 4-12
RPC/Literal Message Format 4-13
Document/Literal/Wrapped Message Format 4-
15 Document/Literal/Bare Message Format 4-19
Agenda 4-22

Implementing JAX-WS Services 4-23
Mapping Server Endpoint Implementation Class 4-24
Mapping Service Endpoint Interface 4-25
Mapping Service Operations 4-26
Mapping Parameters, Return Types and Exceptions 4-28
Specify SOAP Service Binding Mode 4-30
Specify Transport Protocol Bindings 4-32
Mapping Service Provider 4-33
Handle Requests Using SOAP Messages 4-35
Produce Responses Using SOAP Messages 4-36
Produce and Consume SOAP Attachments 4-37
Using WebServiceContext and MessageContext Objects 4-
38
Summary 4-39
Practices 4-40

5 Invoke SOAP Services Using JAX-WS API

Objectives 5-2
JAX-WS Client Implementation Options 5-3
Generate Proxy Client 5-4
Generated Proxy
Client 5-5
Invoke a Service Using a Proxy Client 5-6
Create a Dispatch Client 5-7
Produce a SOAP Request Message with a Dispatch Client 5-8
Process a SOAP Response Message with a Dispatch Client 5-9
Summary 5-10
Practices 5-11

6 Handle JSON Using JSON-P and JSON-B APIs

Objectives	6-2
What is JSON?	6-3
JSON-P API	6-4
Parse JSON Data Using Object Model API	6-5
Produce JSON Data Using Object Model API	6-6
Parse JSON Data Using Streaming API	6-7
Generate JSON Data Using Streaming API	6-8
JSON-B API	6-9
JSON-B Configuration	6-10
JSON-B Annotations	6-13
Defining and Validating JSON Structures	6-14
Summary	6-16
Practices	6-17

7 Build REST Services Using JAX-RS API

Objectives	7-2
REST Service Conventions and Resources	7-3
REST Services Example	7-4
HTTP Requests	7-5
HTTP Responses	7-6
Mapping REST Application to URL	7-7
Register REST Resources	7-8
Define REST Resources	7-9
Using HTTP Methods in REST Communications	7-10
Mapping REST Resource Operations	7-11
Defining Parameters	7-12
Validating Values	7-13
Producing Errors	7-14
Automatic Marshalling and Unmarshalling Messages	7-16
Produce Messages Using Response Object	7-17
Define and Document REST Service Interfaces	7-18
Oracle Apiary	7-22
Summary	7-23
Practices	7-24

Java EE Security API	9.a-5	
Java EE/MP Authentication and Authorization Flow		9.a-6
Configure Identity Store	9.a-7	
Configure Authentication Mechanism	9.a-8	
Configure Role-Based Authorization	9.a-9	
Programmatic Security Enforcement	9.a-10	
WebService Policy Enforcement	9.a-11	
WS-Security	9.a-12	
Attaching WebLogic Policies	9.a-13	
Summary	9.a-14	
Practices	9.a-15	

8 Invoke REST Services

Objectives	8-2	
REST Client Responsibilities	8-3	
Simple HTTP Client	8-4	
Asynchronous HTTP Client Capabilities	8-5	
JAX-RS Client	8-6	
Asynchronous JAX-RS Client Capabilities I	8-7	
Asynchronous JAX-RS Client Capabilities II	8-8	
Reactive JAX-RS Client I	8-9	
Reactive JAX-RS Client II	8-10	
Microprofile JAX-RS Client	8-11	
AJAX JavaScript Client	8-12	
Modern JavaScript Client	8-13	
Summary	8-14	
Practices	8-15	

9.a WebServices Security and Policies

Objectives	9.a-2	
Web Services Non-Functional Requirements		9.a-3
Configure Security Infrastructure	9.a-4	

9.b Secure REST Services using OAuth

Objectives 9.b-2

Cross-Application Security Concerns 9.b-3

OAuth 2.0 Participants 9.b-4

OAuth 2.0 Access Control 9.b-6

Security Tokens 9.b-7

Obtaining Access Tokens Using OAuth 2.0 9.b-8

Register Client Application with OAuth Authorization Server 9.b-10

Register Resource Application with OAuth Authorization Server 9.b-11

Grant Client Application Access to Resource Scopes 9.b-12

Use Authorisation Token to Access a Resource

9.b-13 Summary 9.b-14

10 Service

Architecture

Objectives 10-2

Service Integration Patterns

10-3 Agenda 10-4

Simple Frontend

Integration 10-5 Frontend

Intermediary 10-6 Backend

Intermediary 10-7 Hybrid

Integration 10-8 Agenda 10
